***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-16, drawn to a method of making a semiconductor, classified in class 438, subclass 758.
- II. Claim 17-20, drawn to a semiconductor device, classified in class 257, subclass 734+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process such as first and second polymeric materials exposed to an oxidizing ambient which initiates the decomposition and second material will partially decompose leaving a thin membrane layer rather than having a thin membrane layer sealing off the air gaps without oxidizing ambient which initiates the decomposition of the polymeric materials.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
